

## Auto Touch Illuminated Magnifiers

**A must-have for easy set-up of colour registration!**

### Information

Magnifiers are handy tools to have in the print room. A good viewer allows printers to inspect fine detail and colour registration, and check for static and pin-holing in the ink layer that are not always apparent at first glance but detract from the sharpness and quality of print reproduction. Auto touch magnifiers are well designed and easy to use with their large lens and built in LED light which is activated when the unit is held in either hand and automatically turns off when released. You'll wonder how you ever got on without one!

### Features

- Touch activated LED light makes it switch-free easy to use, and saves on battery power
- Ergonomic shape is comfortable and more practical than conventional printers loops
- Easy to recharge with plug-in mains charger (supplied), gives up to 16 hours of illumination
- Available in 3x, 5x, 7x, 9x and 11x magnification
- Maintenance free, shock resistant LED light for easy print viewing.

◀ 7x magnified view of prints makes it easy to check for sharpness and solid ink coverage.

No more trips over to the window or desk lamp, the LED light makes it easy to check colour registration and detail whatever the light level in the print room.
